Special Issue on

Emerging Carbon Materials for Environmental Applications

Journal Metrics (2025)

- Impact Factor: **2.3**
- CiteScore (Scopus): **3.8**
- Journal Citation Indicator: **0.29**

Submission Deadline
30 October 2027

Scope

Applications of emerging carbon materials (e.g., graphene, carbon dots, carbon aerogels, biochar) for the removal of emerging contaminants and broader environmental protection.

Key Topics *(including but not limited to)*

- Advanced oxidation processes
- Electrochemical environmental technologies
- Carbon sequestration and climate change mitigation
- Microbial inactivation and water disinfection
- Waste management and resource recovery
- Biochar for soil fertility enhancement
- Nanocomposites for reactive barriers
- Microplastics and PFAS removal from water
